**Periodic Management Report
Including D1.3.1-v5 1st annual accounts and audit report
(Corrected to include 'Cost budget follow up table'
and the 'Budgeted / actual person months table')**

Due date of deliverable-v1: 29 April 2005

Actual submission date: 28 April 2005

Start date of project: 15 March 2004

Duration: 4 Years

Professor David Arnold
University of Brighton

Section Two – Financial Reports and Audit Certificates

Form C Financial statements per activity for the contractual reporting period, to be completed by each contractor and accompanied by Audit Certificates. These documents have been scanned and included in a separate file for reference.

Section Three – Summary Financial Report

Summary Financial Report	46
--------------------------------	----

Commentary on Management data

Introduction

This commentary is intended to make the numeric data which constitutes most of the report more easy to digest and analyse.

Six tables are included in this document:

- Table showing work performed by each contractor during the period
- Budget vs. Actual Costs
- Attribution of Contribution Used by Activity to Budget, by period
- Person-Month Status Table
 - For Effort supported from EPOCH contribution
 - For AC Partners only for effort or “permanent” staff
- Summary Financial Report

Table showing work performed by each contractor during the period

This table is a descriptive statement for each Workpackage, in partner order, of the contributions made by each partner receiving contributions from EPOCH to the activity. To get a holistic view of the way these contributions fit together at the activity level it is necessary to review the information in conjunction with the activities deliverables.

Budget vs. Actual Costs

This table is drawn from the Commission’s reporting guidelines and tries to compare the current situation for the project against plans. Implementing it as guided has a number of flaws. Initially partners were not clear whether overheads should be included and returns were not all on the same basis. The project coordinator took the decision to include overheads so that the figures were consistent with later tables. More problematic are the facts that no budget was ever required split into labour, major cost-items and other; and that the guidelines require comparison with the 48 month budget, which ignores the phasing of work planned through the project and in the case of NoEs the development of JPA from one revision to the next.

Attribution of Contribution Used by Activity to Budget, by period

The budget planning included in EPOCH is undertaken on the basis of allocations to each partner (currently 83) for each activity (21 in JPA18) in six month periods (8). Budgets are recorded as both contribution and estimated PMs. The 27888 budget figures can potentially be compared to the same number of actuals and the results can be aggregated and presented in many ways, but the three dimensional nature and sheer size, makes none of them easy to analyse in detail. Leaving out all the zeros (and there

are many) may reduce the volume but makes consistency and completeness checks and budget amendments, much harder.

This table is one summary of the planning and monitoring by the EPOCH management, comparing JPA18 budgets to the eligible costs reported by partners in the first year. It is broken down by activity and 6 month period. The split between the two semesters is not based on audited reports and should be considered an estimate based on partners reports. The data in the budget table will be different for JPA2 of course and the carry-forward of unused budget and roll-out of unallocated contribution will further complicate the comparative data in future returns.

The table shows that the broad pattern of financial results mirrors the pattern expected from the activity reporting. Overall costs in the first semester were less than 50% of budget in line with an estimated average of 3 months to get activities up to speed. Items reported as “Network Management” were over budget but this is compensated by the below budget costs in “Financial Control and Budget planning”. It is likely that many items could have been reported as either – e.g. dealing with partners about activity/budget planning or management reporting might have been recorded under either heading.

WP2 overall also shows a slow start but with the catch-up being achieved rather faster, particularly in the areas of stakeholder needs and showcase integration. The later directly reflects the needs to complete a set of showcases for use in discussion with stakeholders from late in the first year. The situation on “stakeholder needs” should be viewed across the related activities of Horizontal and Vertical integration, where resources were put into consultation to determine the frameworks for each perspective. A strategic decision was taken at the end of 2004 to accelerate consultation processes on research directions in order to inform the process of defining the initial set of NEWTONs in time to build the specification into JPA2. This whole process is defined in D3.2.1 (Report on the Process and results of the Call for the 1st Generation of Newton Projects).

In Workpackage 3 the pattern of costs mirrors the build-up experienced elsewhere. The anomaly reported here of no costs in coordination reflects the fact that the coordination in the first year was undertaken entirely by staff who were not an eligible cost. Some travel costs associated with coordination have probably been attributed under the Common Infrastructure line.

Costs on Workpackage 4 have built-up in line with activities. In this area a significant proportion of the unspent first year budget will be in carry-forward of unallocated budget, as the courses program, for example, gets underway. In addition this is an area where some costs committed in the first period may not have been claimed until the second period e.g. for bursaries approved in the first year but spanning the period from year 1 to year 2.

Person-Month Status Tables (funded and AC-permanent staff)

This table compares budgeted PM resources to those reported used by partners, broken down by workpackage and activity. In order to match the Budget vs Actual cost table the budgeted figures here are the JPA48 totals. The rows titled “difference”

should more correctly be thought of as “remaining”. The second table in this section only includes AC partners and hence is shorter. The project total effort is different from the previous table because some of the initial planning of unallocated made assumptions of the likely PM effort that would result when the funds were allocated to partners. This amounts to 280.5PM and is included in this table’s total (1280.7PM) but omitted from the actual vs budget table’s total (1000.2).

Summary Financial Report

The Summary Financial Report is based on the Commission standard template and splits management costs out of the total eligible costs. It also applies the EPOCH consortium agreement’s rules of allowing reduced recovery of the eligible costs of FC and FCF partners below the maximum of 100% allowed in the core contract. The reduction had been agreed originally in the Consortium Agreement as 50% of eligible costs for FC and FCF partners, but amended in the light of the FP6 reduction of FCF overheads from 80% to 20% to allow FCF partners to recover 75% of eligible costs. (For more information see D1.2.4 Periodic Activity report – Appendix 2)

Significance and reliability of detailed data.

The assembly of the data has been more complex than originally anticipated due to a number of factors, primarily relating to implementation of a totally new instrument in the initial planning and first (ever) round of reporting for that instrument. Two factors about the new instruments in particular led to complications in the collection of data and preparation for management reporting:

- (i) Amongst the initial guiding principles heralded for FP6 was that the new instruments they designed to require less micro-management of the projects by the Commission and give more flexibility to consortia in managing their own affairs. This was manifested in the relative lack of detail required in planning types of expenditure in comparison to FP5 projects for example.
- (ii) For NoE’s, budget is phrased as a grant for integration, and appears intended as a contribution for the additional work involved in paving the way for generation of an ERA and promoting integration of partners, who are engaged in work supported from other sources for the bulk of their activities. NoE funding is in general to top up activities in ways which lead to integration of the work of partners. As such NoE funds are available to spent in the most appropriate categories of eligible expenditure needed to enhance integration and these categories will be highly dependent upon local circumstances.

The combination of these two factors meant that in EPOCH, partners were required to take on obligations in terms of contributing results to activities and budgetary contributions were agreed in return for delivering those obligations. It has however always been the case that the full cost of the obligations would be substantially higher for all partners. Effort might come from staff funded from other sources (either partner’s own or other external funding) where the additional EPOCH contribution

allowed their activities to be “coloured” in ways which meet EPOCH’s JPA and agenda of integration.

Some examples would include:

- The adoption of standards and systems in order to change a team’s preferred development environment and produce tools which integrate with the proposed EPOCH infrastructure.
- The further development of research software in order to make it suitable for release to other research groups.

Both of these might involve significant effort which was not part of the original research project but the additional effort might be supported in different ways for local reasons – in one group hiring additional effort for testing and documenting software and the other engaging in additional skills development for the existing team members for example. Much of the detail of planning at this level was not required to be made part of the contract planning in the initial FP6 NoE planning and EPOCH organisation had attempted to mirror this by placing emphasis on achieving results and contributing to activities whilst allowing precise methods of delivery to be locally chosen and adapted over time (within the limits of the contract).

One consequence of the EC contribution as a “grant for integration” is that the resulting split between personnel and other costs appears to have resulted in a higher proportion of “other costs”.

The reporting guidelines for the new instruments continued to be developed after the contract had started and the first cost claim required some detail in the reporting which had not been required in planning at contract time. For example, the reporting of costs divided into labour, major cost items and others, had not been required at budgeting time and was believed to be one of the important flexibilities built into the new instruments. Hence the comparison of the actuals against budget plans, broken down into these areas could not be meaningful. It also became clear during the cost claim processing that the standard templates, which break down the claim in terms of the Workpackages, did not provide sufficient detail when used with the standard set of Workpackages built into the contract. This particularly affected those areas where explicit breakdown to activity had not been expected at budgeting time (e.g. attributing travel undertaken for a multi-purpose meeting to several activities, retrospectively).

The last areas of data quality for which health warnings are needed are the “estimates of permanent staff” from AC partners. These are clearly designated as estimates and the attribution of those estimates to specific activities is not something that partners were expecting to have to do. The work required of partners to make such estimates reliable would be considerable including the introduction of timesheets for permanent academic staff - a step which few universities have yet been prepared to take. The estimation is also complicated by the interpretation of “permanent” – should this be only those with indefinite contract termination dates, or should it also include staff whose effort is paid by third party support, but whose results are equally interesting to have embedded in EPOCH activities (e.g. contributions to events or website repositories).

All AC partners were asked to provide estimates of the time of permanent staff, and the EPOCH management reviewed these estimates based on the activities the partner had undertaken. For example an AC partner who had no eligible costs and had not reported any estimated involvement of permanent staff, but had attended meetings of the assembly and contributed to consultation exercises, was credited with some effort based on those participations.

The consequences in operational terms on NoEs (or at least EPOCH) are that the initial management data had to be supplemented by additional detail from all partners. With the size of the EPOCH NoE there were inevitable variations in the speed of response of partners at each call. The consequences in terms of data quality are that retrospective attribution of some costs between activities, under management pressure for fast turnaround, cannot be considered as reliable as initial coding and the estimates of AC permanent staff PMs must be considered as exactly that - estimates.

Table showing work performed by each contractor during the period

Workpackage 1

1	University of Brighton	Brighton	<ul style="list-style-type: none"> • Overall Coordination • Handling contract negotiation, Accession to the contract • Consortium Agreement • Financial services to the Network (e.g. processing advances and unallocated funds release) • Production of Activity Reports to the Project Officer • Production/Quality control on deliverables • Servicing meetings of the Executive Committee, Board of Directors, Assembly • Organisation of the Review College Nominations and subsequent processing of Membership • Coordination of consultations on strategic development of the NoE, and leading on the analysis of comments and production of responses to comments • Production of materials for partner votes on applications to join the NoE. • Preparation, conduct and implementation of the result of voting on the changes to consortium rules on eligibility of costs. • Representation of EPOCH at Concertation meeting • All communications with the project officer • Preparation of revised JPA documentation, including budget analysis and planning.
2	PIN – University of Florence	PIN	<ul style="list-style-type: none"> • Participation in the Executive and Board of Directors (Planning, Organisation, Monitoring of NoE operations)
